Description

Hello!
We are using eXtplorer but are facing a problem: when uploading files named in greek, the file' s name is not shown correctly, it' s like it doesn' t show the correct encoding. What could be the problem? In the configuration file, I see that default encoding id UTF-8, but waht else could be wrong? In the server, I can the file' s name just fine.

Thanks in advance.

For anyone with the same problem, we were able to solve the problem by altering two lines of code in list.php:

around line 240: in the

if ($GLOBALS['use_mb']) clause,

replace

$items['items'][$i]['name'] = utf8_encode($item);

with

$items['items'][$i]['name'] = $item;

(twice)

Hope it helps!
