- File Filesystem.php added

Hello Again,

i have modified libraries/HTTP/WebDAV/Server/Filesystem.php to use mysqli extension rather than mysql.

I usually use PDO for mysql, but i was much easier/faster to use mysqli in this case.

i ran some test, it seems to work correctly on PHP 7 !

you will find the modified file attached, it may help.

Regards

- Category set to Feature

- Status changed from Neu to Gelöst

- Target version set to 2.1.10

thank you very much for these changes! will be available in the next release.
