

## eXtplorer - PHP-based File Manager - Fehler #338

### problem with sub directories with same name

02/02/2017 03:45 PM - Atesin Dj

<b>Status:</b>	Neu	
<b>Priority:</b>	Normal	
<b>Assignee:</b>	Sören Eberhardt-Biermann	
<b>Category:</b>	Bug	
<b>Target version:</b>		
<b>eXtplorer Version:</b>	2.1.4	<b>Joomla! Version:</b> none
<b>Description</b>  /vhosts/domain/subdomain/*  /www/netgamer/www/forum/plugins/*  (note the 'www' directories) for ease and security, i set the root path as /www/ so i can manage all my vhosts with 1 extplorer installation  in this case when i try to install plugins, i cannot browse the subdirectories, when i double click it tries to change the name instead  also when i click the 'help/about' button, a message popups: 'the directory //netgamer/www/www/forum does not exists', i had to rename my vhosts dir to access subdirs (centos7 + nginx + explorer 2.1.9)  'hide pattern' option does not work either, i used to hide ^explorer\$ for security reasons, but doesnt work anymore
