Description		
Hi!		
For a long time I'm looking for normal File Manager to my D-Link DNS-323.		
All tested is uncorrectly work with russian (Cyrillic) file names.		
As a result I found next - some application on some device (or platform) cannot correctly autodetect actual internal code page.		
Midnight Commander (for example) must be recompile with follow manuell correction in lib before build:		
1. in file /lib/strutil/strutil.c		
string		
return (nl_langinfo (CODESET));		
must be replaced on		
return "UTF8";		
2. in file /lib/tty/tty-slang.c (S-Lang lib required)		
in string		
SLutf8_enable (-1);		
remove "minus"		
SLutf8_enable (1);		
I'm test all release of eXtplorer (2.1.0 RC3/RC4/RC5) and in all cases I have received follow:
