Description		
<p>I'm using joomla 2.5 with dyndns.org (dynamic ip provider). The server is running on higher ports then the basic (443, 80, 8080) since the internet provider is blocking this.</p> <p>When i now start extplorer in joomla backend, i get the joomlamenu (top) and the footer of extplorer. But for the rest, the browser is keeping on refreshing.</p> <p>Any idea what i can do?</p>
