Description		
The Upload Window in IE 8 doesn't show.		
Looks like this: http://jing.hax.at/2011-03-28_1719.png		
Error: http://jing.hax.at/2011-03-28_1708.png		

History

#1 - 03/28/2011 06:03 PM - Klaus Eder

```
create:function(d,e){return d.render?d:new b[d xtype||e](d)}
```

seems to be the part where the error comes from ...

in compatibility view mode it sometimes works ...

#2 - 03/28/2011 06:38 PM - Klaus Eder

The problem seems to occur somehow because of the external scripts not being loaded correctly by IE.

If you login, then choose a folder and try to upload it'll show the empty dialog, if you hit f5 and refresh, and then hit the upload button again it'll work.

Very strange behaviour.

#3 - 03/28/2011 08:23 PM - Klaus Eder

The problem lies in ux.ondemandload, IE doesn't like it, I have no idea why.

I have replaced the function with:

```
@Ext.ux.OnDemandLoadByAjax = function(){
```

```
loadComponent = function(component, callback){
    handleSuccess = function(response, options) {
        var type = component.substring(component.lastIndexOf('.')+1);
        var head = document.getElementsByTagName("head")[0];
        if (type === ".js") {
            var js = document.createElement('script');
            js.setAttribute("type", "text/javascript");
            js.text = response.responseText;
            if (!document.all) {
                js.innerHTML = response.responseText;
            }
        }
    }
}
```

```
head.appendChild(js);
}
```

```
if(typeof callback == "function"){
    if(document.all) {
        callback();
    } else {
        callback.defer(50);
    }
};
```

```

    };

    handleFailure = function(response, options) {
        alert('Dynamic load script: [' + component + '] failed!');
    };

    Ext.Ajax.request({
        url: component,
        method: 'GET',
        success: handleSuccess,
        failure: handleFailure,
        disableCaching : false
    });

    };

    return {
        load: function(components, callback){
            Ext.each(components, function(component){
                loadComponent(component, callback);
            });
        }
    };
}();@

```

which I got here:

<http://www.sencha.com/forum/showthread.php?60350-Ext.ux.OnDemandLoad-Dynamic-load-js-file-and-invoke-the-method-in-it>

now it works.

still two:

Meldung: 'Ext.get(...)' ist Null oder kein Objekt

Zeile: 58

Zeichen: 6

errors though, which are probably unrelated to this though ...
