**Description**

Extplorer was working fine.
The the Provider moved the Website from a temporary Webspace (like www.companie.test.de) to
the actual Weblocation (like  www.companie.de)
after that happend the extplorer didnt showed any more fieles.
even go to ftpmode didnt do no good. uninstall and reinstall
didnt help ether.
Please help how can i get the extplorer to work again.
kind regands ralf
